

# Software Engineer

Senior Software Engineer with proven impact across **enterprise integrations, API platforms, security hardening, and AI-driven developer productivity**. Trusted to lead complex, cross-system problem solving and consistently operates at a force-multiplier level — improving platform reliability, accelerating teams through automation, and turning ambiguity into repeatable systems. Over 10 years of experience developing and maintaining web applications across PHP, Python, and Node.js environments.

## Experience

### Deltek Philippines

#### Senior Software Engineer — July 2018 to present

- Led high-impact fixes across SOA, Middleware, Collective, and Docs — resolving production-critical issues in rehire flows, imports, exports, token management, and client integrations
- Designed and implemented cross-system transaction tracing, aligning Middleware, SOA, and Talent logs to drastically reduce investigation time
- Served as escalation engineer for complex IRZ and production issues, often resolving cases others could not due to depth across systems
- Remediated multiple security vulnerabilities (CSRF, XSS, access control, token handling) across legacy and modern stacks
- Upgraded or removed outdated frontend dependencies (AngularJS, jQuery, Chart.js, jQuery UI) and strengthened token lifecycle management
- Spearheaded Claude / Power AI adoption across the Integrations organization — built context systems, custom commands, and MCP-based workflows for test generation, story point estimation, and release notes
- Delivered a YAML-driven API Test Runner POC using Claude MCP for REST/XML automation
- Enabled QE and developers to adopt Playwright MCP for scalable UI and API testing
- Acts as trusted PR reviewer, consistently preventing systemic issues from reaching production
- Helped establish API automation standards using PHPUnit, PHPStan, and Playwright MCP
- Authored and migrated critical documentation (PDF → Markdown) covering APIs, tokens, integrations, and system flows
- Go-to advisor for QE, DevOps, and Support teams on root-cause analysis and system behavior

## RareJob Phils

### Senior Developer — September 2012 to July 2018

- Led development of the core tutor platform across multiple major releases — from conceptualization to production
- Built a real-time messaging and alerts system using Node.js, Flask, MongoDB, AngularJS, and Redis
- Developed Chatty — a full scheduling, attendance, resource, and notifications platform for tutors and admins
- Created Docker and Vagrant environments; defined SOLID and Domain Driven coding standards
- Pioneered Codeception for unit and functional testing; trained developers and QA on adoption
- Integrated JP REST API into the enterprise platform; contributed to Jenkins deployment pipeline
- Built internal systems — email queue, staff sync, team management, Email CMS, and password rotation
- Led full-cycle development of the core tutor-facing web application across multiple major releases as Project Lead and Code Reviewer (Yii, Codeception)
- Built the tutor-side enterprise web app with Docker environments; established SOLID/DDD coding standards and integrated the JP REST API (Laravel, Docker, Codeception)
- Developed a real-time messaging and alerts system with a standalone frontend app and an admin site for tutor support chat (Node.js, Flask, AngularJS, MongoDB, Redis)
- Built a scheduling, attendance, and notifications platform for tutors; admin site covered approvals, reports, S3 uploads, and email marketing (CakePHP, AngularJS, Express.js, Amazon S3)
- Developed a payroll computation system from biometric CSV exports; calculated hours against schedules, overtime, and holidays with Excel export and audit trail (Yii, MySQL)
- Built internal backend systems — email queue, JP-to-PH staff sync, team/promotion management, Email CMS, "What's new" content management, and password rotation enforcement

### BPO — Sykes, HP, Dell, StarTek

#### Technical Support Representative — July 2018 and earlier

- Inbound technical support for DSL, CableDSL, desktops, laptops, and accessories.

## Strengths

- Systems thinking across distributed architectures
- Deep integration and HRIS domain expertise
- Security- and reliability-focused engineering
- AI-augmented development and automation
- Calm, effective ownership in high-pressure scenarios
- Clear, actionable communication that unblocks teams

## Skills

### Languages & Frameworks

- PHP (Laravel, Lumen, Yii, CakePHP)
- JavaScript / TypeScript (Node.js, Express.js, React, Angular)
- Python (Flask, FastApi, Django, Celery)

## **APIs & Integration**

- REST
- XML APIs
- GraphQL
- HRIS platforms

## **Testing & Quality**

- PHPUnit
- PHPStan
- Codeception
- Playwright
- pytest — TDD, BDD, SOLID, Domain Driven Design

## **AI & Automation**

- Claude Code & MCP Servers
- Prompt engineering
- MCP-based workflow design
- YAML-driven test automation

## **Data**

- MySQL
- MongoDB
- Redis
- ElasticSearch
- Amazon S3

## **DevOps & Tooling**

- Git
- Azure DevOps
- Docker
- Vagrant
- Composer
- npm
- Jenkins
- Capistrano
